## How Does AutoLifeRx Work

**Faster Engine Warm-Up** In a system that uses a thermostat or other means of controlling water flow until a certain water temperature is obtained; AutoLifeRx will absorb the heat of the engine parts, transferring heat evenly and throughout the engine. When AutoLifeRx is added to water it acts like a heat sink. The water temperature will rise faster, reducing the time for warm up. The heat is evenly transferred to all of the engine parts creating a more even warm up, reducing cold start-up wear and tear. Additionally, this translates into a big fuel savings, allowing equipment to be put into service sooner with faster warm-up.

**Reduces Water Temperature** Once the thermostat opens up, AutoLifeRx will transfer all of the heat it has absorbed into the radiator or cooling tower. Its ability to transfer this heat will now make the radiator work more efficiently to remove heat from the AutoLifeRx water mixture. Results vary depending on the size and volume of your entire water system.

**Reduces Internal Engine Parts Temperature** Acting like a heat sink, AutoLifeRx has the ability to remove heat from internal engine parts. Reducing the operating temperature of the internal parts of your engine has a major impact on the wear and tear of engine components. In engines, where high rpms are required, such as racecars, this becomes critical to the life span of components such as valve springs, wrist pins, cylinder walls and pistons. Increasing the life span of these components reduces costs when rebuilding and helps to minimize failures.

**Reduces Oil Temperature** AutoLifeRx by reducing the temperature of the internal parts will also help to reduce oil temperatures, a reduced oil temperature means less chance of oil breakdown and in turn decreases the chance of damage caused by poor lubrication.

**Reduces Hot Spots in Engines** All engines have some variance in water temperature from front to back or side to side. AutoLifeRx with its ability to absorb heat and transfer it evenly actually reduces the potential of hot spots and virtually eliminates steam pockets. AutoLifeRx has shown to reduce the variance of temperature in hot spots by up to 40 degrees. The ability to reduce hot spots is vital in the search for horsepower. Controlling the hot spots now suggests that the window can be stretched just a bit further when seeking the last ounce of horsepower from performance engines.

**Reduces Engine Temperature Rise During Stops and in Traffic Jams** AutoLifeRx will also keep your water temperature lower in conditions where there is little or no airflow. With its ability to pull more heat out of the motor and into the radiator, AutoLifeRx helps keep your engine cooler while idling.

**Easy to Clean-Up and Environmentally Friendly** AutoLifeRx is a plant-based product that is non-toxic and biodegradable. AutoLifeRx is non-petroleum based and when accidentally spilled, it is very easy to clean up. For example, if accidentally spilled AutoLifeRx works to actually breakdown and clean hydrocarbons on the surface. AutoLifeRx is then easily cleaned-up with any dry absorbent product. AutoLifeRx actually evaporates faster and cleans up easier than just plain water. For racers and racetrack promoters, this is a big advantage allowing for faster clean-up and enhanced track safety. AutoLifeRx; can be used as a cleaner in garage area and racetrack applications to clean up grease and/or a fuel spill.
